

NETTING FOR ROUND BALES, SLOWFEEDER

47-1321604

Poultry netting increases the horse's well-being through the slow intake of haylage

- Durable netting with 45 x 45 mm feed openings
- Increases the horse's well-being through the slow intake of haylage
- Soft material that is gentle on the horse's muzzle
- Reduces feed waste
- Also recommended in feeders

Suitable for all types of horses that are fed with haylage

Having poultry netting for round bales, you are doing yourself, the horses and your wallet a favour. It's easy to put on, it reduces roughage waste and you know that the horse is eating at a slow pace.

Another major advantage is that the hay does not end up on the ground, where it becomes dirty and trampled down, which can lead to certain health risks if the animals ingest this.

Slow feeding – improves the horse's well-being

The horses are able to eat at a calm and controlled pace, thanks to the large square openings of 45 x 45 mm. Slow feeding promotes the horse's well-being as it gives leisurely and more natural intake of feed. The hay is pushed out through the netting as the horse eats. When feeding time gets a little longer, behavioural and digestive problems can be avoided.

The material is hard-wearing and durable

The poultry netting is made of a soft material for maximum gentleness against the horse's muzzle. The netting is also made of UV-protected polypropylene material that promises durability and weather resistance over a long period of time. The poultry netting can be used both out doors and indoors.

The size of the poultry netting for round bales is 180 cm high and 150 cm in diameter.

NOTE! Any plastic film / netting around the hay bale must be removed before use.

It is a good idea to use the poultry netting even when feeding with a feeder, as it reduces roughage waste all around.

If you would rather hang your poultry netting to free up floor space, you will find suspendable poultry netting with Product no. 47-1321606

TECHNICAL DATA

Colour	Green
L x W x H	B 1500 x H 1800 mm
