

ATV GRASS AND LEAF COLLECTORS

35-GUB120B

Engine-powered sweeper for leaves, grass and rubbish

For ATVs or smaller tractors with 50 mm tow bar ball hitch. Stiff brushes effectively sweep up loose materials and discharge them into the hopper that holds approx. 500 l/150 kg.

Variable sweeper roller adjustment using a crank, substantial front grassland tyres and spring-loaded rear pivot wheels, and hopper is easy to empty with manual winch

5.5 hp petrol motor powers the sweeper roller via a centrifugal clutch and belts; the engine is fitted with an oil level monitor which shuts down the machine at low oil levels. The 120 cm working width makes it an effective tool when collecting leaves and grass from lawns and parks.

Yet another thought-out product that supplements Kellfri's small-scale machine and equipment range and lets you use your ATV or property maintenance tractor in more ways.

TECHNICAL DATA

Working width	1200 mm
Wheels	16 x 6.50-8/13 x 6.5-5
L x W x H	3000 x 1750 x 860 mm
Engine	6,5 hp
Weight	265 kg
