

CHIPPER PETROL-DRIVEN

13-WC08E

With its 15 hp motor, this chipper devours large branches up to 8.5 cm

- Equipped with emergency stop
- 2 cog belts
- 2 cutting blades and 1 counter blade
- Clevis hitch for easy transport
- 470 x 330 mm infeed hopper

Chips wood waste, small trees, branches and twigs and use as fuel for heating, bark and mulch for garden beds, running track surfaces, compost, etc.

The powerful infeed roller works quickly, so the machine works efficiently. The roller has two powerful reversible blades with a width of 30 cm and one counter blade, and is driven by the petrol motor.

The blade angle and position automatically draw the branches into the feed roller, so that you can release the branch as soon as the blades have taken hold of it. From a safety point of view, this is the best option. The infeed hopper opening is fitted with plastic strips to guard against any ejection of chippings and bark.

Power transmission is provided by two parallel belts. The shredded wood and chippings are fed out through the outlet chute by the centrifugal force generated by the rotor.

The height from the ground to the infeed hopper is 110 cm, which is the best ergonomic height.

The chipper is easy to move by hand or using a garden tractor/ride-on mower using the clevis hitch. Its compact design means it can be used in all gardens and other confined spaces.

TECHNICAL DATA

Wheels	15"
L x W x H	2310 x 800 x 1500 mm
Engine	15 hp 4-stroke petrol
Timberdiameter	Max 85 mm
Weight	180 kg
