

DOZER BLADE 2.1 M INCLUDING WHEELS

37-210SH

[See videos](#)

Dozer blade with powerful blade with three fixed positions in both directions

- Working width 2.45 m incl. side wing
- Easy to attach to the tractor's three-point linkage
- The blade can be rotated through 360°
- The blade can be set to three different working angles for forward work and three different positions for reverse work.
- Side wing, stabilisers, support wheels and lifting arm pins as standard

Dozer blade with a total working width of 2.45 metres including a side wing which helps to push the snow out into ditches. The wing is easy to remove for other tasks such as dragging gravel roads, courtyards etc. The width of the wear steel then becomes 2.0 m.

Kellfri's 210S dozer blade is a very robust dozer blade that can easily be mounted to the tractor's three-point linkage. The blade can be rotated through 360° and set to three different working angles for forward work and three different positions for reverse work.

The support wheels are easy to fit with a pin and adjust for the correct working height and blade angle when clearing snow. A particularly useful function on unfrozen ground, dragging gravel roads and other adjustment work.

The dozer blade is supplied with side wing, stabilisers, support wheels and lifting arm pins as standard.

TECHNICAL DATA

Working width	2000 mm
Total width	2450 mm
Blade height	480 mm
Expansion wing	450 mm
Wheels	Standard
Wear steel	Standard
3-point linkage	Kat 1
Turning of blades	Mechanical
Weight	162 kg
