

BACKHOE DIGGER FOR TRACTOR 25-50 HP

26-LW06

Fitting a backhoe digger on your tractor gives you an efficient excavator

- Backhoe digger for tractor size 25-50 hp
- Mounted on 3-point linkage
- Digs 210 cm deep, bucket width 30 cm

Fitting a backhoe digger on your tractor gives you an efficient excavator and even more uses for your tractor.

The backhoe digger is ideal for most digging jobs such as ditch clearing, repairing forest roads, fixing drainage gullies and pipes. Erecting gateposts, laying electricity cables and water pipes to buildings and pastures, excavating minor foundations for construction work, etc.

The backhoe digger digs 210 cm deep, with a serrated digger bucket 30 cm in width.

The backhoe digger is connected using the tractor's three-point linkage and is operated using a separate hydraulic pump attached to the tractor's PTO. The separate hydraulic tank is well protected between the attachment points for the tractor's lifting arms.

Powerful hydraulic stabilisers provide excellent support when digging, even on uneven ground. You sit behind the tractor on the backhoe digger and control all the functions in the bucket and the boom by means of a 2-lever system. The stabilisers are controlled with two separate levers.

The grading bucket and ditch bucket accessories extend and simplify use of the backhoe digger.

Product requires assembly.

TECHNICAL DATA

Excavation depth	2100 mm
Hydraulic flow	25 l/min
Hydraulic pressure	160 bar
Loading height	1530 mm
Reach width	2590 mm
Transport width	1200 mm
Transport height	1500 mm
Bucket width	300 mm
Turn angle	180°
Overhang transport	1040 mm
Weight	445 kg
