

MINIDUMPER, 500 KG

27-MD500

Easy-to-operate, safe minidumper that can handle loads of up to 500 kg

- Easy transport of gravel, soil, building materials and more
- Easy access with caterpillar tracks
- Load capacity up to 500kg
- Highly manoeuvrable in tight spaces
- Hydraulic dump function

Strong, highly manoeuvrable and easy-to-operate minidumper

A minidumper is the perfect tool for loading and transporting loose material or fixed objects in narrow spaces which larger vehicles cannot access.

With 3 forward gears and 1 reverse gear, you will quickly find the work rate you think is best for each unique task. There are also high and low gears, which you can easily manoeuvre from the handlebars.

The minidumper is ideally suited for spaces both large and small. Because of its strength in relation to its compact size, it performs best in constricted spaces and individual track guides help minimise the turning radius and facilitate steering.

Transport gravel, building materials and other heavy objects on the minidumper's robust floor and tip them off hydraulically. The floor is 950 mm in length, 680 mm wide and 465 mm deep. The minidumper also has fixed lashing eyelets that can be used for transporting and/or lifting the minidumper by crane.

Tracks facilitate accessibility

Thanks to the 180 mm track width and the minidumper's length of 160 cm, the pressure is distributed over a larger area, thereby enhancing accessibility and protecting the surface you are driving on. The track tread pattern also provides a very strong grip on e.g. clayey soil and snow.

Serving many of our customers

The minidumper is a popular tool for contractors and private customers in e.g. construction, gardens and animal stalls. Load, haul and dump, easily and safely with Kellfri's minidumper

TECHNICAL DATA

Width	Track 180
Floor dimensions	950 x 680 x 465 mm
L x W x H	1615 x 720 x 1050
Maxload	500 kg
Engine	4,3 hk/3,2 W
Tank	Petrol
Tip	Max 60°
Weight	271 kg
