

## FEEDER BOX FOR HORSES

34-FHK05

### Feeder for those using small bales or loose roughage as feed

- L x W x H 115 x 65 x 60 cm
- Distance between grille bars 6.5 cm

A small galvanized feeder with fine gauge mesh ensuring it takes the horse longer to eat its feed.

The base of the feeder is off the ground to prevent roughage from touching the ground.

The cover is kept in place by rings on the long edges, allowing it to drop with the feed as the horse eats. The feeder is also easy to use without a cover.

### Important factors to consider when choosing a feeder for horses

Even though horses all belong to the same species, there are many different breeds, and therefore different behaviours, from long nerve fibres to short explosive nerve fibres. You know your horses' behaviour and what is best for them, and in order to avoid injuries we ask you to think about how the horses react in various contexts where a feeder is involved.

The number of horses that can gather around a feeder is decisive for the size of the feeder and how many feeders are appropriate. Remember that the less space there is around a feeder, the greater is the risk of injury. You yourself are responsible for your choice of feeder model, since you know your horses best.

### TECHNICAL DATA

Grate width	Distance 65 mm
L x W x H	1150 x 650 x 600 mm
Weight	50 kg
