

THE KELLFRI GATE 173 CM HIGH

25-300173

The Kellfri Gate – Now in even greater heights

- Strong, stable gate feet to prevent the gate sinking into the ground
- The gate has flat oval tubular piping to take the strain instead of bending
- Robustly constructed to withstand the pressure of heavier animals
- The gate is fitted with loop feet
- The gates are easy to connect together with a lock chain

Suitable for various types of animals, including cattle and horses

The gate system is flexible and simple – the gates are easy to move, making it easy to construct herding paths, stalls, pens, collection pens, sick pens and screened-off areas. The only limit is your imagination

The gates can be used in different ways, depending on the season. In winter, for example, they can be used for interiors in loose housing barns or for constructing rest sites etc.

Smart design in every detail

The gates are solidly constructed with flat oval tubular piping which provides an extra strong structure and enables the gate to withstand the pressure of even large and heavy animals.

The height is generous at 173 cm, so that the animals do not jump over the erected enclosure.

The loop design of the gate foot prevents the gate from sinking into the ground.

The gates are simple to connect together with a chain lock, which facilitates fast and secure connection.

The gates are galvanized for a long service life.

TECHNICAL DATA

Between pipes	185 mm
Tubular pipe size	50/30 mm
Total width	3000 mm
Total height	1730 mm
Weight	38 kg

ACCESSORIES

Extend your application with these practical accessories.
